¿Does it make sense to use with students some methods that we no longer use to self-teach us?

- Peer to peer learning and training
- Production of learning materials in collaboration with students
- Collaboration between students worldwide (specific interests)

Open questions:

- Do we need new tools?
- Social networking methodologies could help?

¿Does it make sense to produce once and again, from scratch the “best” learning materials we can produce?

- Licensing terms
- Tools for sharing, improving, adapting, forking, contributing back, reporting errors, discussing
- Tools for announcing, promoting, recommending

Open questions:

- Do we need the forge for learning materials?
- Can we learn from FLOSS production? From Wikipedia?
Anything else?
